BURNERS MADE IN ITALY

Capturing the fire
to free the heat.

COMPANY PROFILE

We are the product
of our labor.

ABOUT

POWERS
RANGE

FROM

11

kW

TO

18.000

kW

Since 1969, the year of its founding, FBR has been synonymous with the design and construction of high-tech burners for industrial, commercial and residential use, distributing to more than 80 countries our constantly evolving Italian excellence.

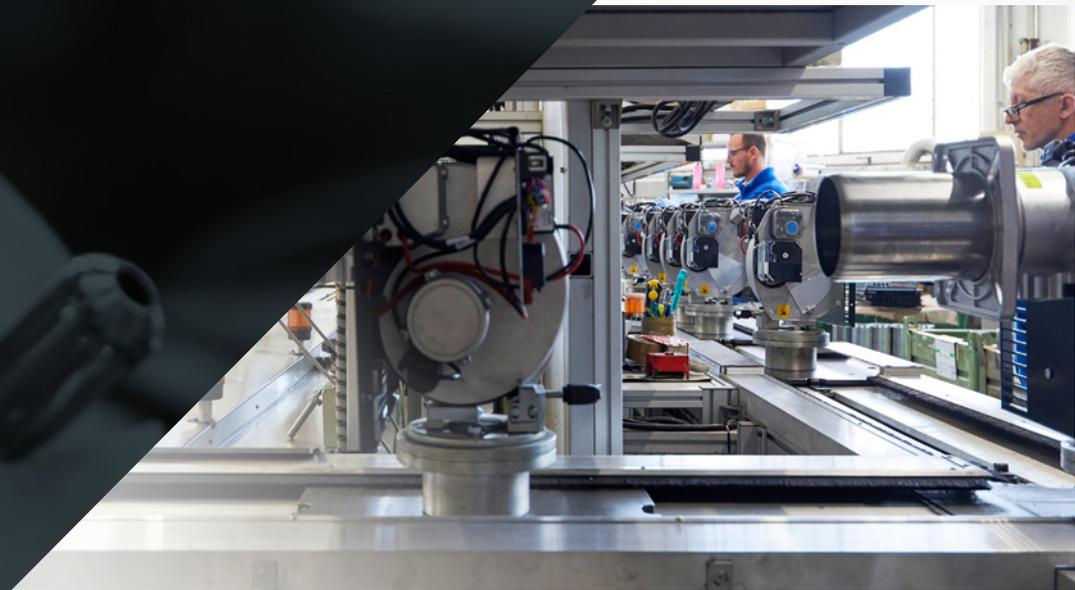

OVER
4.000.000
BURNERS
INSTALLED ALL
OVER THE WORLD

OVER
400
POINTS
OF TECHNICAL
SUPPORT

IN MORE THAN
80
COUNTRIES

We have always spoken of ourselves through our high-performing products, telling a story that has developed along with the innovations and the needs of our clients, and often anticipating responses to their future requirements.

Designed, created
and tested 100% in Italy.

MADE IN ITALY

The definition “Made in Italy” was tailor-made for us:
in F.B.R., human resources are important because everything is conceived in order
to be built and tested using accurate controls within the company.

In each phase of production,
quality is guaranteed, even in the selection
of our components, which are supplied
by the best European producers.

BURNERS
FOR RESIDENTIAL
USE

BURNERS

USE

TAILOR MADE
SPECIAL
BURNERS

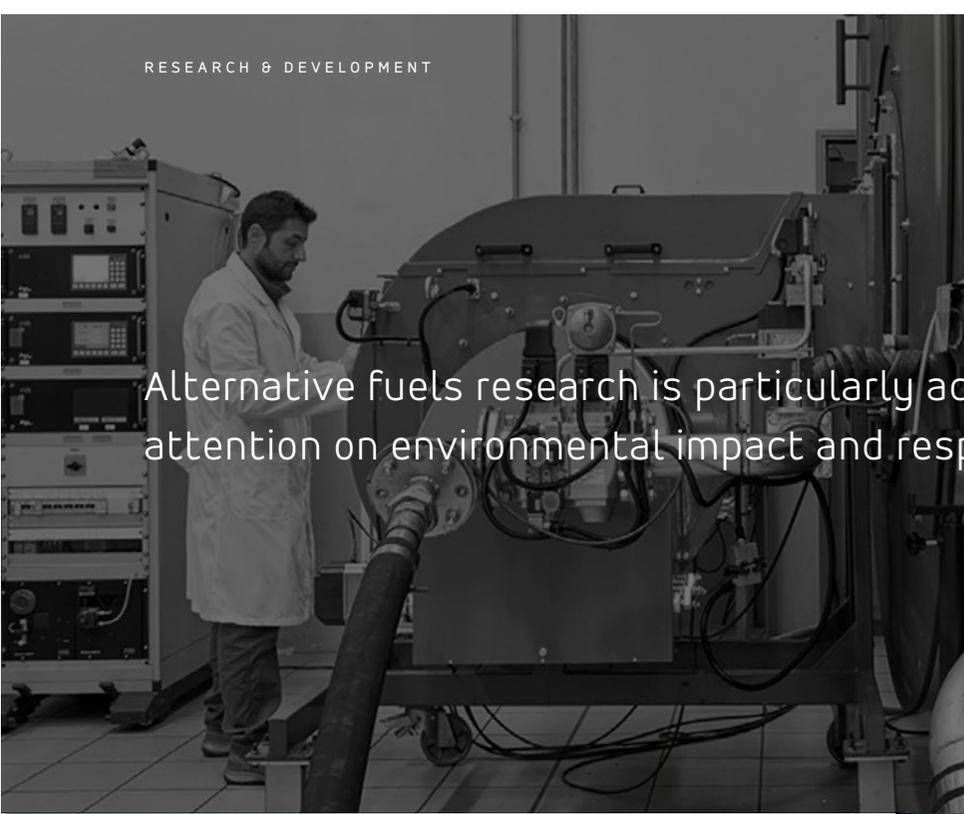

We focus on every necessity,
present and future.

RESEARCH & DEVELOPMENT

The search for the best performance is a full-time job for our team of combustion and electronics experts, which uses the most up-to-date instruments for auditing, performance analyses and long-term testing.

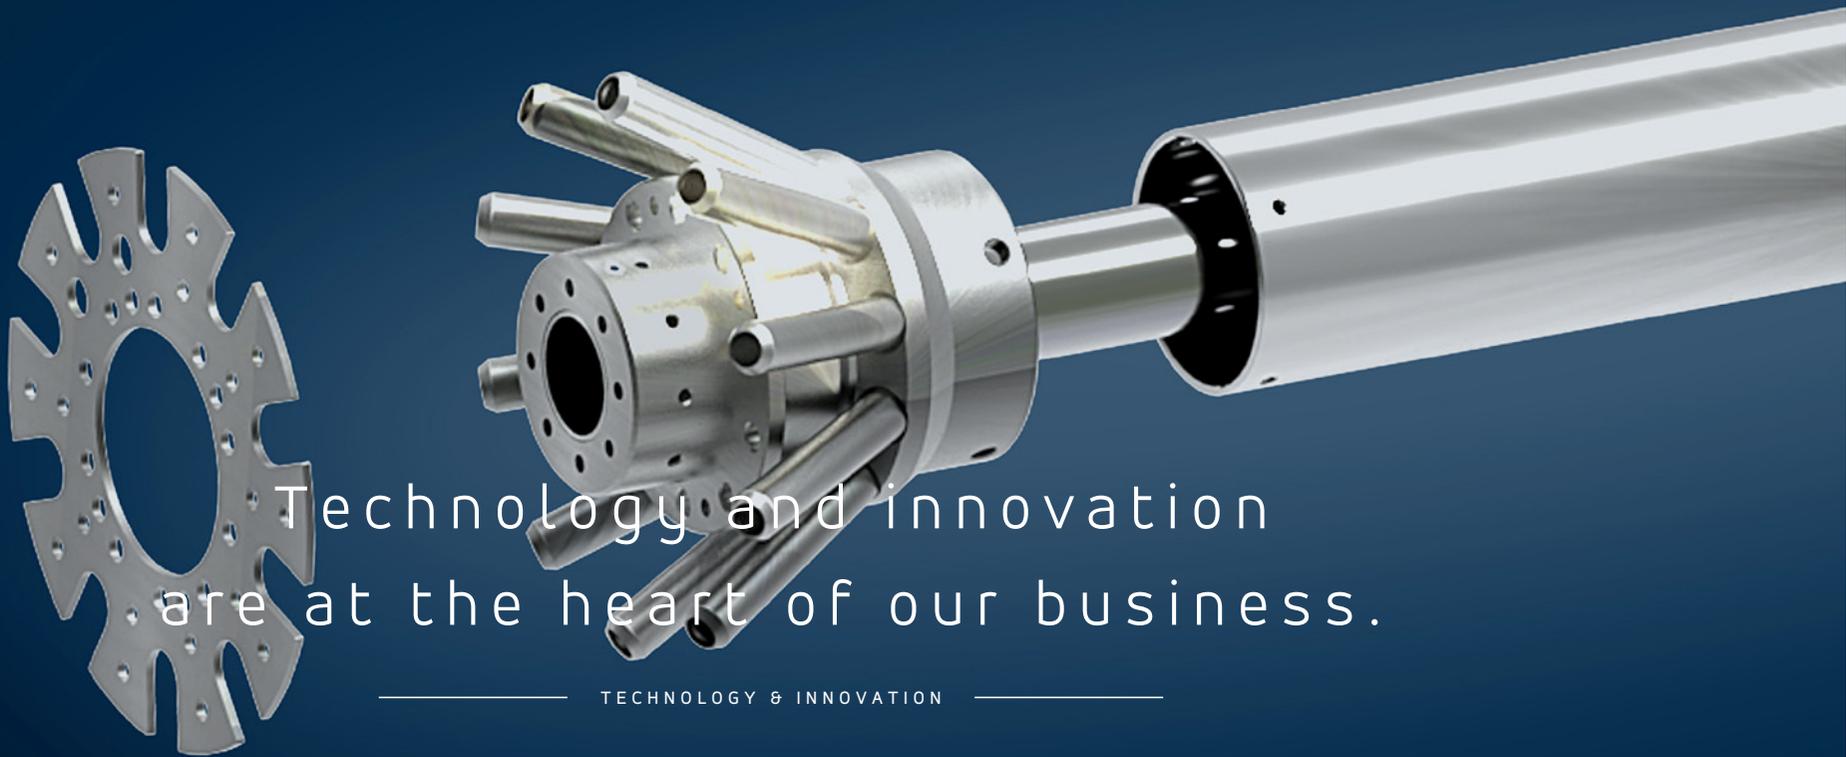

Alternative fuels research is particularly active, focusing specific attention on environmental impact and respecting ecology.

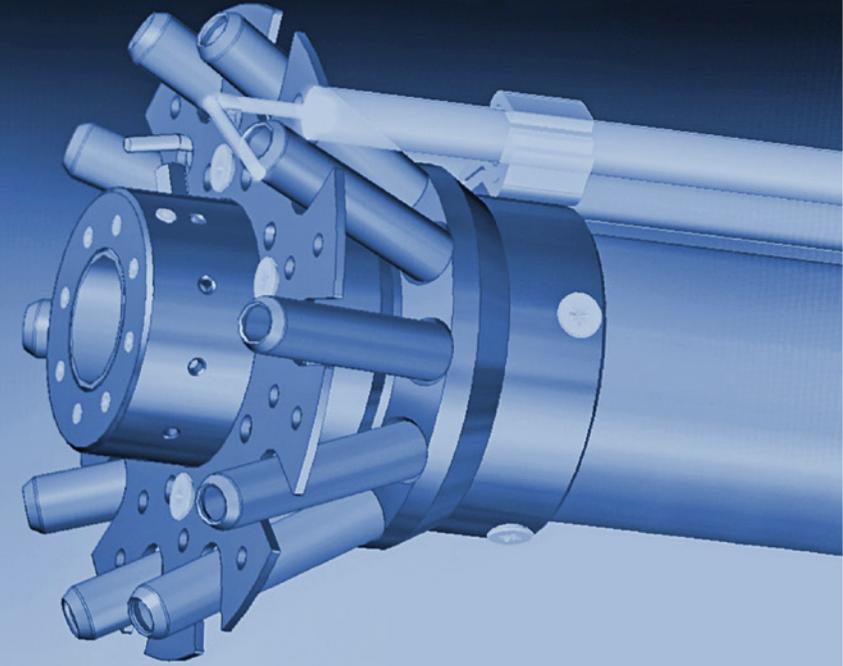

Being certified with the Quality System ISO 9001:2000, we guarantee products which conform to and are certified by current CE regulations. This allows us to create a wide range of products, even customised products based on the specific requirements of the client.

Our F.B.R. Research and Development Lab guarantees maximum quality and continuous technological progress in constant synergy, in order to furnish our products with the best qualifications and to transform our clients' requirements into concrete and innovative projects.

Technology and innovation
are at the heart of our business.

TECHNOLOGY & INNOVATION

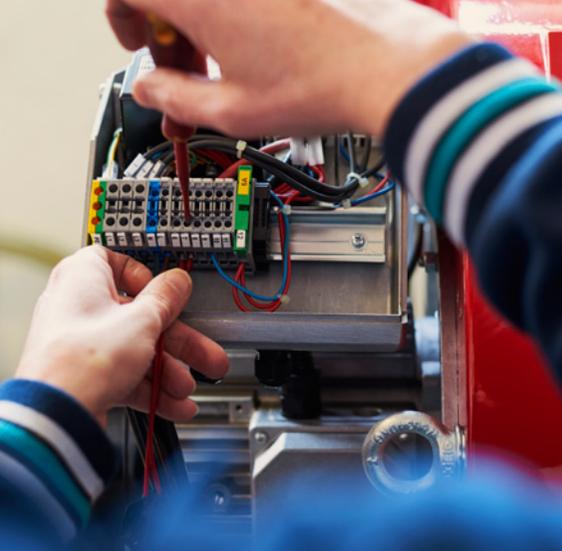

Our consolidated team of designers and technicians interpret the real needs of both the market and single users, innovating as a function of new environmental regulations, such as the specifications for the FGR System, which sets ultra Low NOx emission values at **less than 30 mg/kWh.**

For our clients, the warmth
of technology and human touch.

SERVICE

Those who trust F.B.R. know that they can fully count on the professionalism that the company provides to every client, and that they also deserve the best in professional assistance, guaranteed by a network of qualified technicians on an international level, constantly updated through training courses held by our qualified technicians in our In-House Training Center, which aims for Quality as an absolute value. F.B.R. also distinguishes itself for the possibility of ordering parts on-line 24 hours a day, and for its easy consultations and immediate delivery.
